

Quick Start Guide Windows Mobile v1.1

Prerequisites

You need to have installed:

- Visual Studio 2005 or later
- Active Sync 4.5
- Windows Mobile SDK 6
- Unifeye SDK Mobile
- Unifeye SDK PC or Unifeye Design (recommended)

Getting Started

1. Connect the Windows Mobile phone
2. Copy the *UnifeyeSDKMobileExample_Installer.cab* from the Start Menu:
SDK Windows Mobile → UnifeyeSDKMobileExample_Installer
to your mobile phone
3. Execute the *.cab file on the mobile phone to install the required configuration files to /Program Files/UnifeyeSDKMobileExample/
4. Now open the example solution from the Start Menu:
SDK Windows Mobile → UnifeyeSDKMobileExample (VS 2005)
5. Make sure *Windows Mobile 6 Professional Device* is selected as target
6. *Debug → Start Debug*

Further Reading

A general overview of the SDK can be found in the *Unifeye SDK Mobile User Manual*.

The main.cpp of the example application shows a basic usage of the *Unifeye SDK Mobile*.

For more information have a look at the code documentation in *Start Menu* → *Unifeye SDK Mobile* → *Documentation* → *Code Documentation* or directly at the *AS_ArMobileSystem.h* header file.
